SEC* warm climate - 13.3 kWh/(m².a) SEC* Class A Type Two-way ventilation unit for residential Type of drive Variable speed drive Recuperative (counterflowheat exchanger) Thermal efficiency of heat recovery 89 % Maximum flow rate Belectric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{wA} Seference flow rate 0.060 m³/s (215.6 m³/h) Reference pressure difference 50 Pa SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % Maximum external leakage 0.34 % An alarm on the user panel appears when filters need changing. To maintain the performance and energy efficiency of the unit it is very important to change filters regularly.	SEC* average climate	- 38.1 kWh/(m².a)
SEC* Class Type Two-way ventilation unit for residential Type of drive Variable speed drive Recuperative (counterflow heat exchanger) Thermal efficiency of heat recovery 89 % Maximum flow rate Electric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{mi} , Reference flow rate 56 dB(A) Reference pressure difference 50 Pa SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % Maximum external leakage 0.34 % An alarm on the user panel appears when filters need changing. To maintain the performance and energy efficiency of the unit it is very important to change filters regularly.	SEC* cold climate	- 76.8 kWh/(m².a)
Type Two-way ventilation unit for residential Type of drive Variable speed drive Recuperative (counterflow heat exchanger) Thermal efficiency of heat recovery 89 % Maximum flow rate Electric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{wA} Seference flow rate 0.060 m³/s (215.6 m³/h) Reference pressure difference 50 Pa SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % An alarm on the user panel appears when filters need changing. Visual filter warning To maintain the performance and energy efficiency of the unit it is very important to change filters regularly.	SEC* warm climate	- 13.3 kWh/(m².a)
Type of drive Type of heat recovery system Recuperative (counterflow heat exchanger) Thermal efficiency of heat recovery 89 % Maximum flow rate Electric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{wA} S6 dB(A) Reference flow rate 50 Pa SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % An alarm on the user panel appears when filters need changing. Visual filter warning To maintain the performance and energy efficiency of the unit it is very important to change filters regularly.	SEC* Class	A
Type of heat recovery system Recuperative (counterflow heat exchanger) Thermal efficiency of heat recovery 89 % Maximum flow rate Electric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{wA} Seference flow rate 0.060 m³/s (215.6 m³/h) Reference pressure difference 50 Pa SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % Maximum external leakage An alarm on the user panel appears when filters need changing. To maintain the performance and energy efficiency of the unit it is very important to change filters regularly.	Туре	Two-way ventilation unit for residential
Type of heat recovery system (counterflow heat exchanger) Thermal efficiency of heat recovery 89 % Maximum flow rate Electric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{wA} Feference flow rate 0.060 m³/s (215.6 m³/h) Reference pressure difference SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % Maximum external leakage An alarm on the user panel appears when filters need changing. To maintain the performance and energy efficiency of the unit it is very important to change filters regularly.	Type of drive	Variable speed drive
Maximum flow rate Electric power input of fan drive, including any motor control equipment, at maximum flow rate Sound power level L _{wA} Reference flow rate 56 dB(A) Reference pressure difference 50 Pa SPI 0.33 W/(m³/h) Central demand control 0.85 Maximum internal leakage 0.17 % Maximum external leakage 0.34 % An alarm on the user panel appears when filters need changing.
